DBI TECHNOLOGIES INC. RELEASES STAFF-SCHEDULER 2.5

Employee and staff scheduling made easier than pen and paper

Winnipeg/Manitoba, May 20 - DBI Technologies Inc., the leader in scheduling software, announces the release of DBI Staff Scheduler ver 2.5. Speaking to the demand of human resource professionals and department managers, DBI Staff Scheduler now includes real time labour costing (cost versus revenue), staff availability filtering, and support for publishing schedules to the web or by email.

Continuing the DBI Staff Scheduler standard, the new features found in version 2.5 maintain the principle of "Easier than pen and paper". DBI understands that for scheduling software to be effective it must work the way human resource professionals and managers have been scheduling their employees long before the advent of computer-based scheduling. In fact, DBI has made it even easier than pen and paper with DBI Staff Scheduler's unique mouse enabled drag-and-drop scheduling facility and powerful "Copy Schedule" feature.

Managers can now be scheduling experts in a matter of minutes - select from the list of staff or positions, drag to the appropriate list or time slot, and you're done. Built-in conflict checking reports on holiday or time off requests, currently scheduled status, days off, and optionally staff availability. Need to make a change - you can leave the eraser and white-out in the drawer - a simple click of the mouse, a drag and a drop and the changes are made, saved and ready for reporting and publishing of the weekly or monthly schedules to the bulletin board, the company website or by email.

DBI has made scheduling virtually headache free and with the low price of DBI Staff Scheduler ver 2.5 (\$349.00 US per computer) it's a simple decision to make this purchase.

DBI Technologies Inc. has been building scheduling solutions for individuals and corporate customers since 1996. Additional information about DBI Staff Scheduler ver 2.5 can be found at: www.staff-scheduler.com.
